PREFACE.

THE preparation of the present work was sanctioned by the Council on March 20, 1890, and entrusted by them to Mr. A. W. Kappel, Assistant Librarian to the Society, who has spared neither time nor trouble in its compilation. It forms a complete Index to the first twenty volumes of the 'Journal of the Linnean Society: Zoology,' so far as they relate to Zoology; up to and including the part issued in August 1891, which contains the Proceedings from November 1888 to June 1890. The work is as far as possible uniform with the Index to the first twenty volumes of the Journal of Botany, published in 1888.

The Index has been compiled throughout from the original Journals, and the table of the dates of publication of the Proceedings and Journals has been specially compiled for this volume with great care, and may be relied on as complete and accurate.

In the case of papers mentioned in the 'Proceedings' which were published in the Society's 'Transactions,' or in Vol. XXI. of the 'Journal,' the additional references have been added to render the Index practically complete. Occasional reference has also been made to the Journal of Botany, in cases where Zoological subjects or species of animals have been incidentally mentioned therein.

The names of species are printed throughout in roman, and synonyms in italics. An asterisk has been appended to every name of a genus or species which appeared to be new. Authors' names have been added to every genus and species; but the frequent omission of these in the original has enormously increased the time and labour required for the preparation of this Index, especially in groups of which no complete or recent catalogue exists. We

would call the attention of writers for our publications to the desirability of appending the name of the author to every species mentioned, and also to every genus mentioned separately, not only to facilitate reference, but as a check upon misprints and errors. A large number of casual errors have been corrected in the Index; and in the more serious cases an explanatory note has been added.

A few omissions and corrections, which escaped notice during the passage of the Index through the press, will be found at the end of the volume, on page 437.

GENERAL INDEX

TO THE

JOURNAL (ZOOLOGY, VOLS. I.—XX.)

AND

PROCEEDINGS, NOV. 1838 to JUNE 1890,

OF THE

LINNEAN SOCIETY OF LONDON.

THE volumes of the 'Journal' are denoted by roman figures in Clarendon, the pages by ordinary Arabic numerals, *e.g.*, **xviii.** 321. The two volumes of 'Proceedings' which preceded the 'Journal' are printed Proc. i. or ii., as the case may be; and the succeeding parts as they refer to the Session, *e.g.*, Proc. (1875–80) 14, which means the part of the 'Proceedings' which covered those dates.

Synonyms are printed in *italics*. A star is affixed to those names which are ostensibly published for the first time.
